SEROLOGY AND SPECIAL TESTS

Test	Result	Interpretation
NS1 Antigen (Dengue)	POSITIVE	Dengue infection likely
Dengue IgM / IgG	IgM Reactive	Acute Dengue infection
Malaria Antigen (RDT)	Negative	No malarial parasite detected
Widal Test (Typhoid)	1:160 (Positive)	Suggestive of typhoid
RA Factor	Positive (64 IU/mL)	Elevated - clinical correlation needed
Anti-CCP Antibody	Positive (>200 U/mL)	Strongly Positive
HbA1c	7.8%	Diabetic range

CRITICAL: Platelet count critically low (88,000/uL). NS1 Antigen POSITIVE for Dengue. Immediate clinical correlation advised.

PATHOLOGIST'S REMARKS

Results suggest Acute Dengue Fever (NS1+, IgM reactive) with thrombocytopenia. Elevated RA factor and Anti-CCP may indicate co-existing Rheumatoid Arthritis. Widal positivity may be non-specific. Clinical correlation strongly recommended.
